<div align="center">IT-Project: Artefacts</div>

Grmaca Sara
Josic Marin
Mayfield Skyler
Ornik Max
Sziener Marcel

Requirements

- Collaboration tool ………………… git – hosted on GitHub
  - o -> git installed (or git bash for windows)
  - o -> git account
- Handling of merge requests …….. git: forking repo + pull request
- Browser + IDE or text-editor ……… up to each member; Visual Studio Code is an option (includes a surface for git)
- Focus on frontside Code

Collaboration tool:

Git - hosted on GitHub
https://github.com/skyler544/it-project

Trello board - invite link:
https://trello.com/invite/itproject298/f315cf93d8f2f9b8b0b8dadedf98f9d7

We created one main-repository and everyone forked it. Now everyone has a copy of the repo. In order to merge everyone's versions to one product, we will rely on "pull requests". A team-discussion to improve the understanding of git and GitHub has been held, including using "Visual Studio Code" and its git-surface.

Other requirements

- No server required – it is an option to implement a server side, but as it is not the main objective of our project, it will only be done, should there be enough time
- top-down view; movement and design in pixel / grid – mode

Effort estimate

We guess that each member will work 2 hours per week. Of course, this is only a rough first estimate.
